

SAP Connector

Accelerate and Simplify Integration Between Solumina and SAP

The **iBase-t SAP Connector** is a proven integration framework that enables seamless data exchange between Solumina MES and SAP ECC ERP platforms. Tested and proven in the most demanding manufacturing environments, the SAP Connector handles the most common integration use cases out of the box while enabling extensions to support your organization's unique SAP configurations and requirements. Our SAP Connector lays a robust foundation for end-to-end integration, configurability, and adaptability.

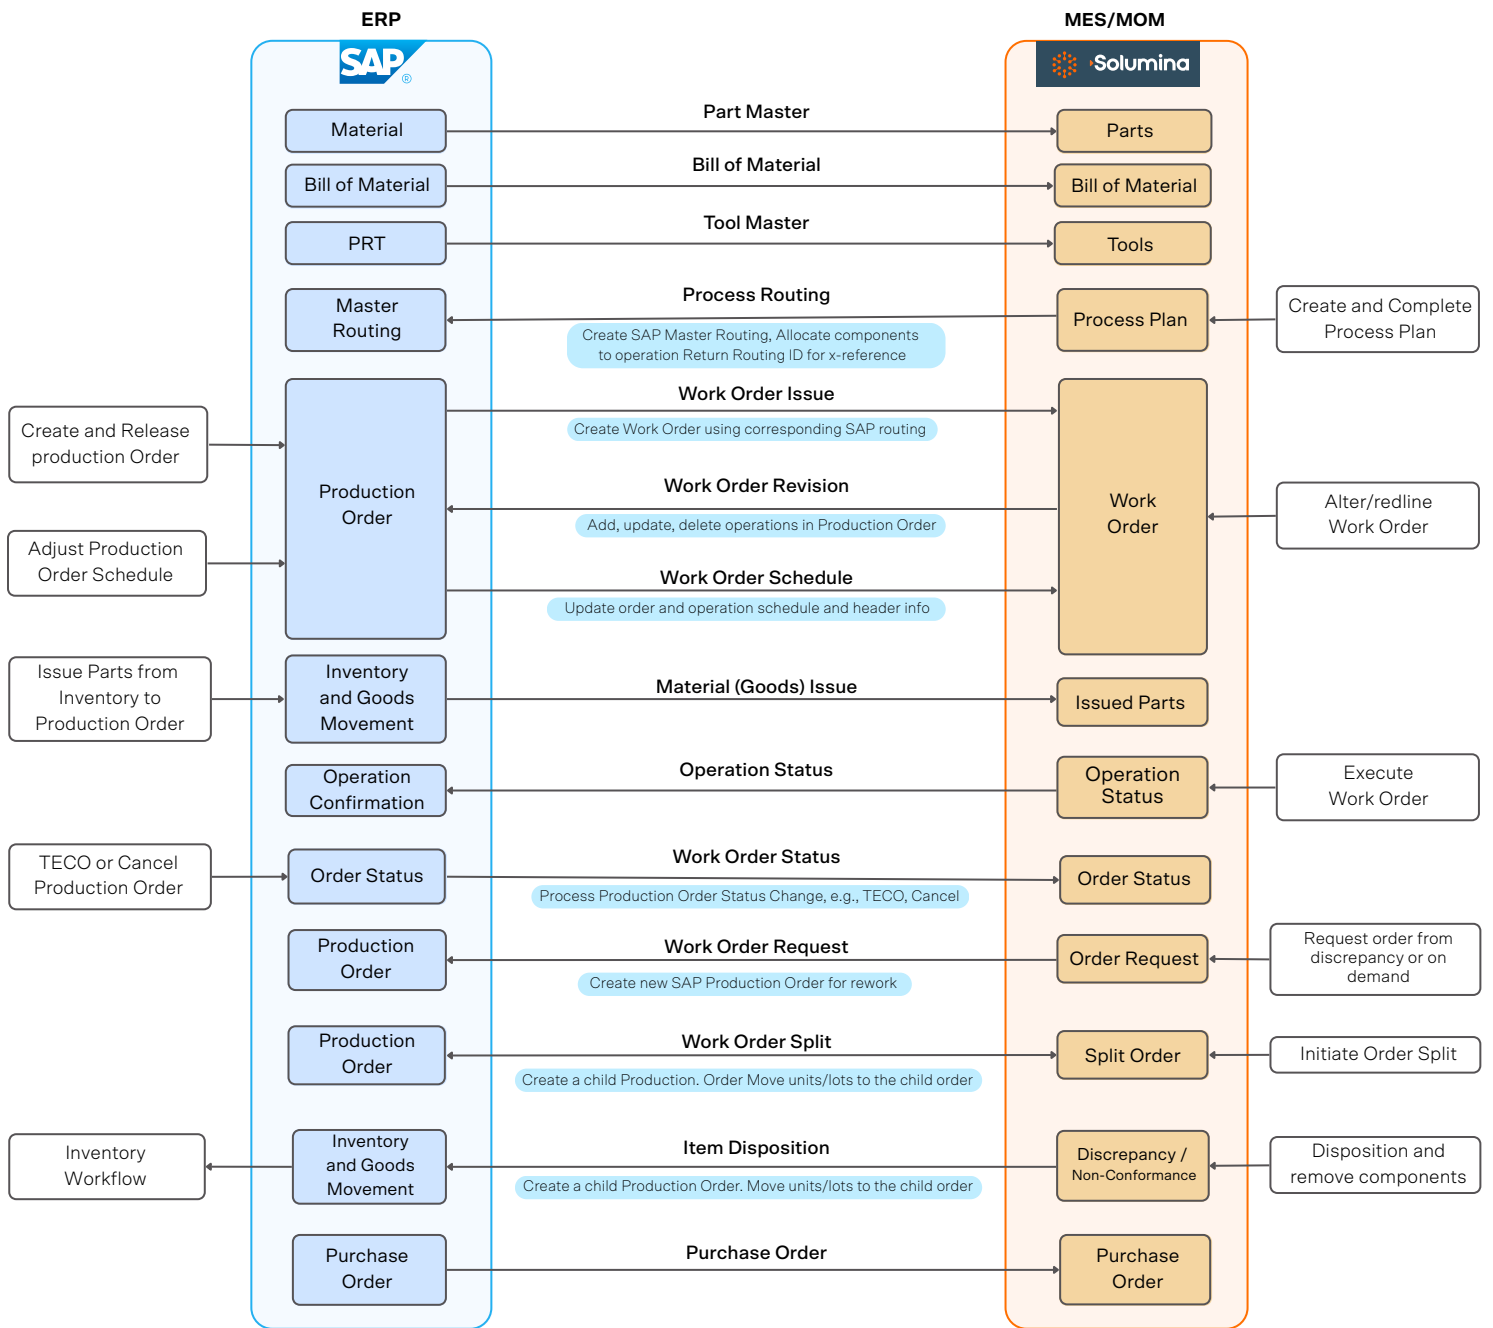

Why the iBase-t SAP Connector?

The SAP Connector empowers manufacturers to:

- Accelerate digital integration across planning, execution, and reporting systems
- Reduce risk through a tested and performance-tuned integration model
- Maintain SAP as the system of record for your enterprise operation
- Streamline implementation with reusable touchpoints and extensibility
- Enable self-sufficiency or partner-led services for ongoing customization and maintenance

Key Features

- **Bundled with 14 Foundational Touchpoints for Solumina MES:** Includes interfaces for master data sync, work order management, routing, and more—offering an out-of-the-box starting point for most manufacturing integration needs.
- **Extendable Integration Framework:** Built as a flexible middleware template rather than a rigid plug-and-play tool, allowing customers to tailor the connector to their unique SAP environment and operational requirements. Extensions can also be added for integration with Solumina MRO and SQM solutions.
- **Supports Key SAP-Solumina Data Flows:** Manages critical flows including:
 - SAP to Solumina: Parts, BOMs, work orders, and inventory issues
 - Solumina to SAP: Process plans, routing for planning, status updates, and inventory disposition
- **Accelerated Time to Value:** Initial interface exchanges can begin within weeks with the right team in place; full production-ready implementations follow to meet your project timeline.
- **Future-Proofed by Design:** Thanks to its decoupled architecture, the Solumina SAP Connector is not impacted by Solumina version updates over time.
- **Implementation & Management Options:** Engage iBase-t's Expert Services Team for connector implementation and maintenance – or leverage iBase-t-led training to empower your own internal SAP team to extend and maintain the integration independently.
