

MORE AGILITY. LESS ANXIETY.

Deploy in 90 days with
the Fast Value program

Today's rapid technological improvements hold high demands for manufacturers. Those operating in complex discrete industries such as Aerospace and Defense, Nuclear, and Industrial Machinery must rapidly deliver complex products with the highest levels of reliability, agility and quality. And they must do so in a tough competitive environment.

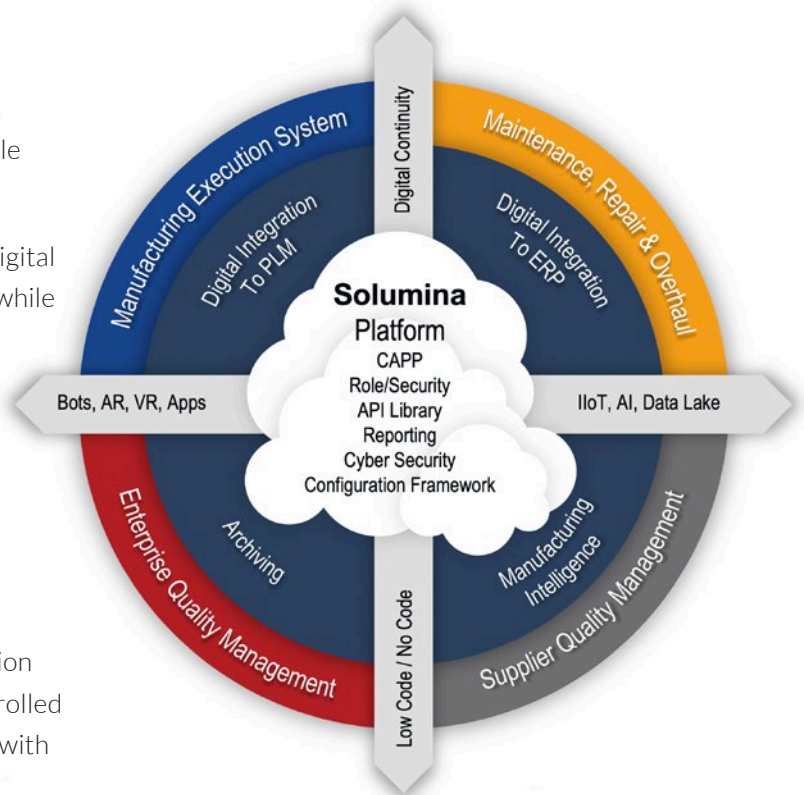

A Proven, Fast and Agile Approach to Digital Operations

Gaining competitive edge requires investment in a robust, value-based digital ecosystem to simplify workflows, enable better process control and improve delivery rates.

Transformation can be risky. A step-by-step approach to digital continuity can help organizations better manage this risk while building a culture of innovation that embraces change.

Simplify the Complex in 90 Days or Less

iBASEt offers the Fast Value program to let you take a first step towards digital transformation. Instead of committing to a large and costly project across your entire value chain, this program lets you capture potential value in 90 days or less. OEMs and other manufacturers can now quickly implement an MES and/or a Quality solution to track and trace shop floor activities in a simplified, controlled environment. Plan your move to a paperless environment with clear goals and full support from iBASEt experts.

Remove Roadblocks to Transformation

Control Cost: Fast Value is a turnkey Manufacturing Execution System (MES) that provides iBASEt customers with recognizable value in 90 days. Now you can validate the ROI of an MES solution while controlling upfront costs, an ideal approach to quickly complete a proof of concept.

Overcome Delays: Too often the intricacies of digitally transforming manufacturing operations results in prolonged discussion, analysis, and stalled initiatives. In a walk-before-you-run mindset, iBASEt's Fast Value Program can get you started inside 90 days. Not one or two years.

Reduce Risk: The key to a successful MES adoption is taking the right steps at the right time. With the option to apply simple, reversible changes, Fast Value lets you minimize risk by starting quickly. Deploy this program alongside existing systems to achieve desired outcomes prior to full scale implementation.

A Successful Foundation for Digital Transformation

AGILE IMPLEMENTATION

Smooth Deployment
Fast Onboarding
Fine-tuning Solution

VALUE REALIZATION

Faster Time-to-Market
Higher Product Quality
Efficient Compliance

A Successful Foundation for Digital Transformation

EXPERT COLLABORATION

Advanced Technologies
System Improvements
Innovation Strategies

CLIENT SATISFACTION

Technical Support
Live / On-site Training
iBASEt e-Learning

Benefits

Define a clear digital vision and roadmap that is firmly linked to your company's business imperatives and industry best practices

Bridge your roadmap and strategy to discover and build digital solutions that lead to fast value and increased benefits

Implement a fast, value-driven digital solution to consistently plan, track and execute operations with minimum downtime and disruption

Measure the ROI of your digital investments to build a solid business case for the strategic roadmap

Extend and monitor the success patterns of your digital solution; measure KPIs to identify new areas for improvement
